

Rossignol Axial Racing / Look PX Racing

For midsole position:

- check on your boot, whether the boot center mark is really in the middle (for some boots it isn't)
- align with scale on toe and heel template to mid sole mark on ski (or measure 1/2 sole length from toe/heel edge to mid sole mark)
- when the template is fixed to the ski, check with your bindings and boots inserted, whether positioning is correct (also for screw positions)

assemble here with other half of template at the mark of your respective boot sole length

turn off information by using the PDF layer function
